Program: Health Expert

Evaluation of the program of education for health expert for multiplying (Health Attentive) in line with the health system development plan based on the CIPP model in 1397

In the context of the health system development plan, the evaluation of the education program for health experts has been initiated. This program aims to multiply health experts (Health Attentive) in line with the health system development plan based on the CIPP model (Context, Input, Process, and Product).

The program was implemented over a period of 1397 in Iran. The evaluation process involved assessing the context, input, process, and product of the program. The context included the political, social, and economic factors that influenced the program. The input covered the resources and materials used in the program. The process involved the delivery of the program and the activities undertaken by participants. The product focused on the outcomes and impacts of the program.

The evaluation revealed that the program was effective in producing health experts who were attentive to health issues. The program was well-received by participants and had positive impacts on the health system. The evaluation also highlighted areas for improvement, such as the need for better resource allocation and more comprehensive evaluation methods.

The findings of the evaluation were used to refine the program and ensure its continued success in the future. The evaluation process was an important aspect of the program, as it allowed for continuous improvement and adaptation to changing circumstances.
