Title: مصرف قناع‌های گرم در بیماران تحت عمل

Author:

Abstract:

The purpose of this study was to investigate the effect of cold ice cubes on nausea and vomiting in patients undergoing laparoscopic cholecystectomy.

Methods:

A total of 100 patients were included in the study. They were randomly divided into two groups: the intervention group received cold ice cubes and the control group received warm ice cubes. The incidence of nausea and vomiting was recorded postoperatively.

Results:

The intervention group showed a significant decrease in the incidence of nausea and vomiting compared to the control group.

Conclusion:

Using cold ice cubes can be an effective method to prevent nausea and vomiting after laparoscopic cholecystectomy.

Keywords: Cold ice cubes, Laparoscopic cholecystectomy, Nausea and vomiting.
